

## **Latest situation of COVID-19 (as of 6 January 2023)**

The Centre for Health Protection (CHP) of the Department of Health (DH) today (6 January) announced the latest epidemic situation of COVID-19. As of 0.00am, 6 January 2023, the CHP was investigating 19527 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 2649 cases tested positive by nucleic acid tests and 16878 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 195 additional imported cases were reported, including 52 cases tested positive by nucleic acid tests and 143 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1190532 and 1549445 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 1177901 cases and 1549445 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 31 December 2022 to 6 January 2023, an average of 3179.4 cases by nucleic acid tests were reported per day, as compared with 4970.6 cases per day reported in the previous 7-day period from 24 to 30 December 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5<sup>th</sup> wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch (PHLSB) during 28 December 2022 to 3 January 2023 for verification testing of local cases, about 0% and 53.51% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5\* (including suspected cases) of the Omicron mutant strain respectively.

**Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks**

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

\*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 26 December 2022 to 1 January 2023, 90.5% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 6 January, PHLSB had identified 226 cases of sub-lineage XBB, 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 13 of BF.7 and 38 of BQ.1.1 among imported cases in Hong Kong, while 169 cases of sub-lineage XBB, 18 of XBD, 1 of BA.2.75.2, 24 of BF.7 and 195 of BQ.1.1 have also been detected among local cases.

Note:

1. Both imported and re-positive cases are excluded in Figure 6.
2. Data in Figure 6 may be subject to changes when there is new information available.
3. Figure 6 (with data as of the preceding week) will be updated every Tuesday.
