

## **Latest situation of COVID-19 (as of 25 September 2022)**

The Centre for Health Protection (CHP) of the Department of Health (DH) today (25 September) announced the latest epidemic situation of COVID-19. As of 0.00am, 25 September 2022, the CHP was investigating 3780 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1084 cases tested positive by nucleic acid tests and 2696 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 117 additional imported cases were reported, including 107 cases tested positive by nucleic acid tests and 10 cases tested positive by RATs. So far, Hong Kong has recorded a total of 944483 and 801017 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 931852 cases and 801017 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 19 to 25 September 2022, an average of 1483.0 cases by nucleic acid tests were reported per day, as compared with 2146.6 cases per day reported in the previous 7-day period from 12 to 18 September 2022 (Figure 1(i)).

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch during 16 to 22 September for verification testing of local cases, about 3.2% and 85.5% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5\* (including suspected cases) of the Omicron mutant strain respectively.

**Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks**

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

\*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 12 - 18 September 2022, 92.3% were BA.5.
