

Latest situation of COVID-19 (as of 5 October 2022)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (5 October) announced the latest epidemic situation of COVID-19. As of 0.00am, 5 October 2022, the CHP was investigating 3318 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1091 cases tested positive by nucleic acid tests and 2227 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 324 additional imported cases were reported, including 299 cases tested positive by nucleic acid tests and 25 cases tested positive by RATs. So far, Hong Kong has recorded a total of 956405 and 826932 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 943774 cases and 826932 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 29 September to 5 October 2022, an average of 1195.1 cases by nucleic acid tests were reported per day, as compared with 1304.3 cases per day reported in the previous 7-day period from 22 to 28 September 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5th wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch during 26 September to 2 October for verification testing of local cases, about 2.8% and 90.7% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5* (including suspected cases) of the Omicron mutant strain respectively.

Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 26 September - 2 October 2022, 97.3% were BA.5.
