

## **Latest situation of COVID-19 (as of 30 August 2022)**

The Centre for Health Protection (CHP) of the Department of Health (DH) today (30 August) announced the latest epidemic situation of COVID-19. As of 0.00am, 30 August 2022, the CHP was investigating 8611 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 2662 cases tested positive by nucleic acid tests and verified 5949 cases tested positive by rapid antigen tests (RATs) in the past 24 hours<sup>Note 1</sup>. Separately, 237 additional imported cases were reported, including 205 cases tested positive by nucleic acid tests and 32 cases tested positive by RATs. So far, Hong Kong has recorded a total of 884194 and 647114 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 871563 cases and 647114 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 24 to 30 August 2022, an average of 2774.7 cases by nucleic acid tests were reported per day, as compared with 2369.4 cases per day reported in the previous 7-day period from 17 to 23 August 2022 (Figure 1(i)).

**Figure 1(i): Daily number and 7-day moving average of cases tested positive for SARS-CoV-2 virus by nucleic acid tests in 2022**<sup>Note 2</sup>

**Note 1:**

Starting from 7 June 2022, only cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" which had been verified with positive nucleic acid test results will be announced. These include RAT positive cases reported in the past few days.

**Note 2:**

- Re-positive cases are excluded in Figure 1(i).
- As announced by the Government on 15 February 2022 ([https://www.news.gov.hk/eng/2022/02/20220215/20220215\\_172336\\_940.html?type=category&name=covid19&title=](https://www.news.gov.hk/eng/2022/02/20220215/20220215_172336_940.html?type=category&name=covid19&title=)) and 25 February 2022 (<https://www.info.gov.hk/gia/general/202202/25/P2022022500816.htm>), positive cases detected by the Hospital Authority and testing contractors are now directly deemed as confirmed cases.

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch during August 21 to 27 for verification testing of local cases, about 7.3% and 49.1% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5\* (including suspected cases) of the Omicron mutant strain respectively.

**Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks**

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

\*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 15 to 21 August 2022, 82% were BA.5.
