

## **Latest situation of COVID-19 (as of 5 November 2022)**

The Centre for Health Protection (CHP) of the Department of Health (DH) today (5 November) announced the latest epidemic situation of COVID-19. As of 0.00am, 5 November 2022, the CHP was investigating 4617 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1213 cases tested positive by nucleic acid tests and 3404 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 494 additional imported cases were reported, including 443 cases tested positive by nucleic acid tests and 51 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1005289 and 937418 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 992658 cases and 937418 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 30 October to 5 November 2022, an average of 1480.6 cases by nucleic acid tests were reported per day, as compared with 1735.4 cases per day reported in the previous 7-day period from 23 to 29 October 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:  
Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5<sup>th</sup> wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch during 27 October to 2 November for verification testing of local cases, about 0% and 90.8% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5\* (including suspected cases) of the Omicron mutant strain respectively.

**Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks**

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

\*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 24 - 30 October 2022, 95.8% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 5 November 2022, PHLSB had identified 208 cases of sub-lineage XBB, six of XBD, eight of BA.2.75.2, seven of BA.4.6, 11 of BF.7 and 29 of BQ.1.1 among imported cases in Hong Kong, while 11 cases of sub-lineage XBB, nine of XBD, one of BA.2.75.2 and 19 of BQ.1.1 have also been detected among local cases.

Note:

1. Both imported and re-positive cases are excluded in Figure 6.
2. Data in Figure 6 may be subject to changes when there is new information available.
3. Figure 6 (with data as of the preceding week) will be updated every Tuesday.
