

Latest situation of COVID-19 (as of 2 November 2022)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (2 November) announced the latest epidemic situation of COVID-19. As of 0.00am, 2 November 2022, the CHP was investigating 4279 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1223 cases tested positive by nucleic acid tests and 3056 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 430 additional imported cases were reported, including 402 cases tested positive by nucleic acid tests and 28 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1001288 and 926547 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 988657 cases and 926547 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 27 October to 2 November 2022, an average of 1659.7 cases by nucleic acid tests were reported per day, as compared with 1657.7 cases per day reported in the previous 7-day period from 20 to 26 October 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5th wave (since 31 December 2021).

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch during 24 to 30 October for verification testing of local cases, about 0% and 91.4% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5* (including suspected cases) of the Omicron mutant strain respectively.

Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 24 - 30 October 2022, 95.8% were BA.5. (to be updated weekly)

In addition, as of 2 November, PHLSB had identified 204 cases of sub-lineage XBB, 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 11 of BF.7 and 24 of BQ.1.1 among imported cases in Hong Kong, while 4 cases of sub-lineage XBB, 8 of XBD, 1 of BA.2.75.2 and 10 of BQ.1.1 have also been detected among local cases.
