

Latest situation of COVID-19 (as of 4 June 2022)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (4 June) announced the latest epidemic situation of COVID-19. As of 4 June 2022, the CHP was investigating 176 additional cases tested positive for the SARS-CoV-2 virus by nucleic acid tests in the past 24 hours. Separately, 270 additional positive cases through rapid antigen tests (RAT) were reported. Hong Kong has recorded a total of 762884 and 451754 cases tested positive by nucleic acid tests and RAT respectively for the SARS-CoV-2 virus so far.

Since the 5th wave (31 December 2021), 750253 cases and 451754 cases were tested positive by nucleic acid test and rapid antigen test respectively.

In the recent 7-day period from 29 May to 4 June 2022, an average of 149.0 cases by nucleic acid tests were reported per day, as compared with 101.9 cases per day reported in the previous 7-day period from 22 to 28 May 2022 (Figure 1(i)).

Note:

1. Re-positive cases are excluded in Figure 1(i).
2. As announced by the Government on 15 February 2022 (https://www.news.gov.hk/eng/2022/02/20220215/20220215_172336_940.html?type=category&name=covid19&title=) and 25 February 2022 (<https://www.info.gov.hk/gia/general/202202/25/P2022022500816.htm>), positive cases detected by the Hospital Authority and testing contractors are now directly deemed as confirmed cases.

As of 4 June 2022, a total of 451754 cases have been recorded through the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test".
