

## **Latest situation of COVID-19 (as of 11 December 2022)**

The Centre for Health Protection (CHP) of the Department of Health (DH) today (11 December) announced the latest epidemic situation of COVID-19. As of 0.00am, 11 December 2022, the CHP was investigating 14233 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 2950 cases tested positive by nucleic acid tests and 11283 cases tested positive by rapid antigen tests (RATs) in the past 24 hours. Separately, 685 additional imported cases were reported, including 590 cases tested positive by nucleic acid tests and 95 cases tested positive by RATs. So far, Hong Kong has recorded a total of 1086852 and 1160157 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 1074221 cases and 1160157 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 5 to 11 December 2022, an average of 3393.1 cases by nucleic acid tests were reported per day, as compared with 2361.0 cases per day reported in the previous 7-day period from 28 November to 4 December 2022 (Figure 1(i)).

Note:

1. Specimen collection dates are used for cases without information of onset dates.
2. Cases still under investigation are excluded in Figure 2.
3. Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Note:

Starting from 29 August 2022, the CHP only verifies cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" by sampling with nucleic acid test.

Table 1 shows the classification of cases reported since the 5<sup>th</sup> wave (since 31 December 2021).

**Table 1: Number of cases tested positive for SARS-CoV-2 virus by nucleic acid tests and rapid antigen tests by classification**

| Reporting period        | Imported case | Locally acquired case | Period total      |
|-------------------------|---------------|-----------------------|-------------------|
| Since the 5th wave      | 57873 (2.59%) | 2176505 (97.41%)      | 2234378 (100.00%) |

Source of data: Data from the Centre for Health Protection of the Department of Health with available information on age and gender.

Among the specimens received by the Public Health Laboratory Services Branch (PHLSB) during 2 to 8 December for verification testing of local cases, about 0% and 60.86% of them (7-day moving average) are related to the sub-lineages BA.2.12.1 and BA.4/BA.5\* (including suspected cases) of the Omicron mutant strain respectively.

**Figure 5: Estimated proportion of Omicron mutant strain among local cases in the past 2 weeks**

Note:

1. Related percentages are estimated from the specimens received by the PHLSB for verification testing of local cases.
2. Data may be subject to changes when there is new information available.

\*Based on sampling by PHLSB for further characterisation, among specimens related to BA.4/BA.5 received from 28 November – 4 December 2022, 91.7% were BA.5. (to be updated weekly)

In addition, as of 0.00am, 11 December, PHLSB had identified 226 cases of sub-lineage XBB, 6 of XBD, 8 of BA.2.75.2, 7 of BA.4.6, 13 of BF.7 and 38 of BQ.1.1 among imported cases in Hong Kong, while 123 cases of sub-lineage XBB, 18 of XBD, 1 of BA.2.75.2, 6 of BF.7 and 143 of BQ.1.1 have also been detected among local cases.

Note:

1. Both imported and re-positive cases are excluded in Figure 6.
2. Data in Figure 6 may be subject to changes when there is new information available.
3. Figure 6 (with data as of the preceding week) will be updated every Tuesday.
