Latest situation of COVID-19 (as of 14 July 2022)

The Centre for Health Protection (CHP) of the Department of Health (DH) today (14 July) announced the latest epidemic situation of COVID-19. As of 0.00am, 14 July 2022, the CHP was investigating 3417 additional locally acquired cases tested positive for the SARS-CoV-2 virus, including 1365 cases tested positive by nucleic acid tests and verified 2052 cases tested positive by rapid antigen tests (RATs) in the past 24 hours Note 1. Separately, 257 additional imported cases were reported, including 251 cases tested positive by nucleic acid tests and 6 cases tested positive by RATs. So far, Hong Kong has recorded a total of 791640 and 491874 cases tested positive by nucleic acid tests and RATs respectively for the SARS-CoV-2 virus.

Since the 5th wave (31 December 2021), 779009 cases and 491874 cases were tested positive by nucleic acid tests and rapid antigen tests respectively.

In the recent 7-day period from 8 to 14 July 2022, an average of 1368.3 cases by nucleic acid tests were reported per day, as compared with 840.0 cases per day reported in the previous 7-day period from 1 to 7 July 2022 (Figure 1(i)).

Note 1:

Starting from 7 June 2022, only cases reported via the "Declaration System for individuals tested positive for COVID-19 using Rapid Antigen Test" which had been verified with positive nucleic acid test results will be announced. These include RAT positive cases reported in the past few days.

Note 2:

- Re-positive cases are excluded in Figure 1(i).
- As announced by the Government on 15 February 2022
